

MOCH. RIZKI KURNIAWAN

mochrizkiks@gmail.com | +6282115145360 | Bandung, Indonesia | linkedin.com/in/mochrks

Software Engineer experienced in designing, developing, and maintaining enterprise web applications across banking, financial services, railway, government, and human resource management industries. Proficient in building scalable full-stack solutions using React.js, Next.js, Vue.js, Spring Boot, Express.js, and modern web technologies. Experienced in delivering end-to-end application development, from designing user interfaces and implementing business logic to integrating APIs, optimizing application performance, and collaborating throughout the software development lifecycle. Passionate about building clean, scalable, and maintainable software that delivers reliable business solutions and exceptional user experiences.

PROFESSIONAL EXPERIENCE

Software Developer <i>PT Padepokan Tujuh Sembilan Bandung, Indonesia</i>	January 2024 - June 2026
Computer Lab Assistant <i>Universitas Jenderal Achmad Yani Cimahi, Indonesia</i>	March 2023 - August 2023
Full Stack Developer <i>Dinas Kesehatan Pemerintah Kota Cimahi Cimahi, Indonesia</i>	July 2022 - October 2022

EDUCATION

S1 in Informatics Engineering <i>Universitas Jenderal Achmad Yani Cimahi, Indonesia</i> GPA: 3.5/4.0	2019 - 2023
---	--------------------

SKILLS

Backend Development: Java Spring Boot, Laravel, CodeIgniter, Express.js.
Frontend Development: React.js, Next.js, Vue.js, TypeScript, JavaScript
Databases: MySQL, PostgreSQL, MongoDB
DevOps & Tools: CI/CD (Gitlab, Github Actions), Jenkins, Apache Kafka, Elasticsearch, Redis, Docker, Kubernetes
UI Frameworks & Libraries: Material UI, Chakra UI, Tailwind CSS, Vuetify, Shadcn UI, Radix UI, Bootstrap
Software Architecture: Object-Oriented Programming (OOP), Microservices, MVC Architecture, Component-Based Architecture

PROJECTS

NEW LOS PT Sarana Multi Infrastruktur (Persero) Enterprise Loan Origination System that streamlines financing workflows, automates loan processing, and improves operational efficiency for financial institutions. Tech Stack: React, Next.js, TypeScript, Spring Boot, Material UI, TanStack Query, OpenAPI, SQL Server - Developed and maintained key modules (Credit Checking, Kajian series, Reassignment SKU, Maintenance Customer Facility Syariah Usulan, Proses Monitoring, User management). - Integrated frontend components with backend APIs using auto-generated OpenAPI clients and Axios. - Implemented efficient data fetching, caching, and synchronization using TanStack React Query and Redux.

- Collaborated on integrating the LOS with surrounding systems like DRD (Documentum).
- Successfully delivered and maintained all assigned core modules within project timelines.
- Enhanced module reliability by identifying and fixing critical bugs.

BJBS MANAGEMENT PROJECT | PT Bank BJB Syariah

Enterprise project management platform supporting project planning, task management, reporting, and real-time operational dashboards.

Tech Stack: React, Vite, Redux, Material UI, Chart.js, Axios, React hook-form

Developed and implemented frontend features based on project requirements, ensuring best practices and performance optimization.

- Developed responsive dashboard and project management features aligned with business requirements.
- Built interactive data visualization components using Chart.js to support operational reporting.
- Integrated RESTful APIs to enable reliable real-time data synchronization.
- Conducted thorough testing of integrated features, including unit testing and end-to-end flow validation.
- Translated Figma designs into reusable and responsive user interface components.

TRAIN PLAN | PT Kereta Api Indonesia (Persero)

Railway scheduling platform designed to manage operational planning, train routing, and real-time scheduling across operational regions.

Tech Stack: React, Redux, Material UI, Springboot, React-hook-form, Axios

- Developed scheduling modules for route planning, schedule publishing, and operational management.
- Implemented CRUD workflows and train schedule calculation features.
- Integrated backend services to ensure accurate real-time schedule synchronization.
- Optimized application performance for large-scale scheduling data.
- Delivered stable and maintainable features within Agile development cycles.

HRMS (Human Resources Management System) | PT Padepokan Tujuh Sembilan

Enterprise Human Resource Management System (HRMS) designed to streamline employee administration, approval workflows, and HR operational processes.

Tech Stack: Next.js, React, Material UI, PostgreSQL, RESTful API, Figma

- Developed responsive and reusable user interface components based on Figma designs using Next.js and Material UI.
- Implemented employee management workflows, including create, update, and approval processes aligned with business requirements.
- Integrated frontend modules with backend APIs to support seamless HR operations and data synchronization.
- Improved application usability and maintainability through reusable components and consistent UI implementation.
- Collaborated with cross-functional teams to deliver scalable and user-friendly enterprise HR solutions.

Reverse Engineering & Re-implementation Productive Loan System | PT Astra Welab Digital Arta (AWDA)

Reverse engineering initiative focused on analyzing an existing loan management platform, documenting system architecture, and supporting the redevelopment of productive loan modules.

Tech Stack: React, Spring Boot, Material UI, Axios, Chart.js, Redux, Apache kafka, Material UI

- Analyzed existing system architecture, business workflows, and backend services to support system re-implementation.
- Produced technical documentation, activity diagrams, and code flow diagrams for backend processes and API interactions.
- Reviewed frontend-backend integration to validate API requests, responses, and application workflows.
- Collaborated with development teams to troubleshoot integration issues and improve implementation quality.
- Supported redevelopment efforts by documenting system behavior and ensuring accurate business process understanding.

TALENT CENTER | PT Padepokan tujuh sembilan

Enterprise Talent Management platform designed to support employee development, talent evaluation, and organizational workforce management.

Tech Stack: React, Spring Boot, PostgreSQL, Material UI, MinIO, JWT

- Developed responsive frontend features supporting talent management and employee evaluation workflows.
- Integrated frontend modules with Spring Boot services and PostgreSQL for reliable data management.
- Implemented secure authentication and authorization using JSON Web Token (JWT).
- Integrated MinIO for document and file management within the application.
- Delivered scalable and maintainable solutions supporting enterprise talent management processes

WEBSITE PPID (Pejabat Pengelola Informasi dan Dokumentasi) | DINKES KOTA CIMAHI

Government information management platform enabling public access to institutional information, document management, and digital communication services.

Tech Stack: PHP, CodeIgniter, MySQL, Bootstrap, PHPMailer, Figma

- Gathered business requirements through stakeholder discussions and translated them into functional system features.
- Designed responsive user interfaces and implemented backend functionalities using CodeIgniter and MySQL.
- Developed document management, search, and information publishing features to improve public information accessibility.
- Integrated email notification services and server-side validation to enhance application reliability.
- Delivered a maintainable web application supporting efficient information management and public service operations.
