

MOCH. RIZKI KURNIAWAN

mochrizkiks@gmail.com | 082115145360 | Bandung, Indonesia

A Software Developer with full-stack web development experience, specializing in building robust and responsive applications with a strong focus on frontend engineering. Skilled in modern frameworks like React.js, Next.js, and Vue.js for creating interactive user interfaces, backend proficiency in Spring Boot, and Node.js to deliver end-to-end solutions. Committed to crafting scalable, performant web applications using Material UI, Tailwind CSS, and TypeScript/Javascript, with an emphasis on clean code, seamless API integration, and optimal user experience. Eager to join a forward-thinking team where I can apply my full-stack expertise with a keen emphasis on frontend excellence to develop innovative solutions that meet business needs and drive technological advancements.

PROFESSIONAL EXPERIENCE

Software Developer <i>PT Padepokan Tujuh Sembilan Bandung, Indonesia</i>	January 2024 - May 2026
Computer Lab Assistant <i>Universitas Jenderal Achmad Yani Cimahi, Indonesia</i>	March 2023 - August 2023
Full Stack Developer <i>Dinas Kesehatan Pemerintah Kota Cimahi Cimahi, Indonesia</i>	July 2022 - October 2022

EDUCATION

S1 in Informatics Engineering <i>Universitas Jenderal Achmad Yani Cimahi, Indonesia</i> GPA: 3.5/4.0	2019 - 2023
---	--------------------

SKILLS

Backend Development: Java Spring Boot, Laravel, CodeIgniter, Express.js.
Frontend Development: React.js, Next.js, Vue.js, TypeScript, JavaScript
Databases: MySQL, PostgreSQL, MongoDB
DevOps & Tools: CI/CD (Gitlab, Github Actions), Jenkins, Apache Kafka, Elasticsearch, Redis, Docker, Kubernetes
UI Frameworks & Libraries: Material UI, Chakra UI, Tailwind CSS, Vuetify, Shadcn UI, Radix UI, Bootstrap
Programming Concepts: OOP Programming, Hexagonal Architecture

PROJECTS

NEW LOS (Loan Origination System) PT Sarana Multi Infrastruktur (Persero) The Loan Origination System (LOS) is a platform designed to manage the entire credit or financing application process — from initial submission to disbursement. This system helps banks and financial institutions operate more efficiently, quickly, and with better control by automating workflows, improving data accuracy, and providing end-to-end visibility throughout the loan lifecycle. <i>Technologies: Next.js 14, React 18, TypeScript, MUI v5.13.5 (Material-UI), Emotion, Zustand, TanStack React Query v5, React-hook-form, Yup validation, Axios, OpenAPI client, Tiptap, Syncfusion Document Editor, Recharts, Azure MSAL, Day.js, js-cookie, crypto-js, pnpm, ESLint, Husky, Commitizen, Storybook, Jest</i>
--

Developed and maintained key modules (Credit Checking, Kajian series, Reassignment SKU, Maintenance Customer Facility Syariah Usulan, Proses Monitoring).

- Integrated frontend components with backend APIs using auto-generated OpenAPI clients and Axios.
- Implemented efficient data fetching, caching, and synchronization using TanStack React Query and Zustand.
- Translated business requirements into functional features, ensuring adherence to UI/UX designs.
- Conducted debugging and resolution of issues across all assigned modules.
- Collaborated on integrating the LOS with surrounding systems like DRD (Documentum).
- Wrote unit tests using Jest and React Testing Library; participated in code reviews.
- Ensured optimal performance of data-intensive modules and maintained responsive, cross-browser compatible interfaces.
- Successfully delivered and maintained all assigned core modules within project timelines.
- Enhanced module reliability by identifying and fixing critical bugs.
- Improved API integration efficiency and error handling.
- Contributed to a more maintainable codebase using component-driven development and Storybook.

BJBS MANAGEMENT PROJECT | PT Bank BJB Syariah

This project involves the development of a comprehensive project management system designed to streamline project tracking, task management, and reporting. The system provides real-time insights through interactive dashboards, facilitates team collaboration, and ensures efficient project workflow management.

Technologies: React 19.1.0, Vite 6.3.5, MUI 5.16.7 (Material-UI), Redux, React-hook-form, Axios 1.7.7, Chart.js 4.4.9, React-chartjs-2, Moment.js, Cookie.js, pnpm v10.11.0, Figma

- Developed and implemented frontend features based on project requirements, ensuring best practices and performance optimization.
- Built interactive dashboards and data visualization components using Chart.js and React-chartjs-2.
- Translated design prototypes (Figma) into responsive and user-friendly interfaces using MUI components.
- Integrated frontend components with backend APIs using Axios, ensuring seamless data flow and real-time updates.
- Conducted thorough testing of integrated features, including unit testing and end-to-end flow validation.
- Successfully delivered multiple key features, including dashboard visualization and project tracking modules, within project timelines.
- Improved API integration efficiency, reducing latency and enhancing data fetching reliability.
- Enhanced user experience by implementing intuitive interfaces and responsive designs.

TRAIN PLAN | PT Kereta Api Indonesia (Persero)

A train scheduling and planning application designed to manage train routes, calculate arrivals/departures, and display train schedules across stations and operational areas (Daop). The system enables efficient railway traffic management through real-time tracking, schedule optimization, and data visualization for train movements and timetables.

Technologies: React 18, Create React App (CRA), MUI v5.15.6 (Material-UI), Emotion, Redux, Redux Thunk, React-hook-form, Yup, Formik, Axios, Recharts, D3.js, React Google Maps API, CKEditor 5, i18next, Day.js, Luxon, Moment.js, Lodash, ExcelJS, XLSX, jsPDF, MQTT, React Stomp, Yarn

- Developed and maintained core modules: Penetapan (Setting/Determination), Update Penetapan, and Publish Schedule.
- Implemented full CRUD functionalities for train schedule data, including detailed data views and management interfaces.
- Built features to calculate and display train arrival/departure times (cepatan kedatangan kereta) in tabular and visual formats.

- Integrated frontend components with backend APIs, ensuring accurate data synchronization and real-time updates.
- Conducted thorough testing to ensure bug-free functionality and seamless module interoperability.
- Ensured responsive and efficient performance for data-heavy operations and schedule calculations.
- Successfully developed and delivered all assigned modules within the 1-month project duration.
- Ensured robust API integration with zero critical bugs, resulting in smooth data flow and reliable system performance.
- Delivered accurate schedule calculation features that met operational requirements for train timing and routing.
- Contributed to a stable and user-friendly application that supported efficient train scheduling and planning for PT KAI.

HRMS (Human Resources Management System) | PT Padepokan Tujuh Sembilan

This project aims to develop a comprehensive Human Resource Management System (HRMS) designed to simplify and automate various HR processes. The system encompasses key functionalities such as managing employee information, handling leave applications, processing payroll, and facilitating other essential HR tasks. By centralizing and streamlining these operations, the HRMS improves efficiency, accuracy, and overall management of human resources within the organization, ensuring a seamless workflow and enhanced decision-making capabilities.

Technologies: Next.js v15, MUI v5, PostgreSQL v16, Figma

- Converted Figma or design prototypes into responsive, interactive, and visually appealing front-end components (UI Slicing).
- Developed and implemented front-end features based on assigned tasks, ensuring adherence to best practices.
- Collaborated closely with the back-end team to integrate APIs seamlessly, ensuring smooth data flow.
- Evaluated and ensured that the user flow aligns with the expected design and functionality.
- Successfully implemented create, approval (approve or reject), and update functionalities for data management tasks.
- Successfully implemented the employee data flow.
- Delivered a functional and user-friendly interface within the stipulated deadlines.
- Streamlined the front-end workflow, reducing the time required for UI integration.

Reverse Engineering & Re-implementation Productive Loan System | PT Astra Welab Digital Arta (AWDA)

Reverse Engineering & Re-implementation Productive Loan System is a project to understand and create documentation for the Maucash Application by analyzing the existing structure, behavior, and functionality, in addition to redeveloping the productive loan module into a separate system.

Technologies: React.js v16, MUI v4, Spring Boot API (Technical Writing BE Flow), Material-UI, Axios, Chart.js, React-chartjs-2, Google Maps React, Cross-env, Styled-Components

- Created detailed activity diagrams and code flowcharts for various backend modules, documenting processes and logic.
- Analyzed existing backend structure to understand data flow and component interaction.
- Provided comprehensive documentation to support developers with accurate understanding of current process flow.
- Performed extensive code reviews for the frontend to ensure error-free API requests and responses.
- Checked API & tested API integration in the application to ensure correct functionality.
- Assisted the development team in debugging issues related to frontend-backend interaction.
- Delivered clear and detailed documentation of the backend flow and frontend integration, supporting new system development.
- Ensured smooth API integration between frontend and backend, contributing to a reliable and functional application.

Talent Center | PT Padepokan Tujuh Sembilan

The Talent Center application at PT Padepokan 79 assists in tracking, evaluating, and developing talents across the company's entire talent pool.

Technologies: React.js v18, Material UI v5, Spring Boot v3, PostgreSQL 16, Io.Minio, Formik, JSON Web Tokens (JWT)

- Utilized Spring Boot for Java application development and Io.Minio for file manipulation.
- Implemented Formik for comprehensive form management and validation.
- Used Material-UI for user interface components, delivering modern and responsive design.
- Managed PostgreSQL as the primary database management system.
- Implemented JSON Web Tokens (JWT) for secure user authentication and authorization.
- Successfully enhanced the efficiency of tracking, evaluating, and developing talent at PT Padepokan 79.
- Achieved significant improvement reported by users in managing and accessing information about talent.
- Supported better decision-making in human resource development within the company.

Website PPID (Pejabat Pengelola Informasi dan Dokumentasi) | DINKES KOTA CIMAHI

In developing the PPID website project using the PHP programming language with the CodeIgniter framework, the primary focus is on building a platform that enables the Information and Documentation Management Officer (PPID) to efficiently manage information. PPID is responsible for the storage, documentation, and provision of information in public institutions. By utilizing the CodeIgniter framework, this project aims to provide various features that facilitate PPID in managing and providing information to the public, including search functionality, easy accessibility to information, and the ability to store and manage important documents regularly.

Technologies: Figma (UI/UX), PHP (CodeIgniter v3), Bootstrap v4, MySQL, PHPMailer for CodeIgniter, CodeIgniter Form Validation Library

- Conducted interviews with key stakeholders from DINKES KOTA CIMAHI to understand needs and objectives.
- Designed the web interface using Figma and implemented responsive design with Bootstrap.
- Developed backend functionalities using the CodeIgniter framework and MySQL as the primary database.
- Integrated PHPMailer for sending email messages and CodeIgniter Form Validation Library for data validation.
- Successfully developed a PPID website that effectively met user needs, enabling efficient information management.
- Equipped the website with intuitive search features and improved accessibility to important documents.
- Implemented an effective email communication system, enhancing communication with users and stakeholders.
- Achieved a significant increase in work efficiency and user satisfaction with the information services provided post-implementation.
